

Dr. Pisit POOLPRASERT

Assistant Professor Dr.

พิสิษฐ์ พูลประเสริฐ

ผู้ช่วยศาสตราจารย์ ดร.

### Current Research Topics

- Potency of Some Medicinal Plant Extracts as Insect Attractants in Paddy Field
- The Utilization of Biological Pest Control Strategies for Sustainable Cassava Cultivation
- Species Identification of Ladybird Beetles Family Coccinellidae in Lower Northern Thailand Using Morphological Characteristics and Mitochondrial DNA Sequence
- The Community Structure of Beneficial and Harmful Arthropod Fauna in Rice Field Ecosystems
- Comparative Microarchitecture of the Insects between Primitive and Advanced Insect Orders
- Application of Synthetic Sex Pheromone Traps for Moth Population Control in Durian Production: Systematics and Pheromone Content of *Mudaria* Durian Seed Borer

### Teaching/Research Fields

Arthropod Pest Management

Biological Control of Insect Pests and Weeds

Crop Loss Assessment and Forecasting of Pest Outbreaks

Insect Ecology

Insect Pathology

Insect Science

### Contact Information

Office: Department of Entomology, Faculty of Agriculture,

Kasetsart University 50 Ngam Wong Wan Rd., Lat Yao

Chatuchak Bangkok 10900

Tel: 02-942-8350

Fax: 02-561-4882

Email: fagrpspo@ku.ac.th; pisit.pool@ku.th

### Education

1998–2001: B.Sc. (Agriculture) Second Class Honors, Majoring in Entomology, Department of Entomology, Faculty of Agriculture, Kasetsart University, Kamphaengsaen Campus, Nakhon Pathom,

2004–2007: M.Sc. (Entomology), Department of Entomology, Faculty of Agriculture, Kasetsart University, Bangkhen Campus, Bangkok, Thailand

2007–2011: Ph.D. (Biological Sciences), Majoring in Entomology, Biological Sciences Program, Faculty of Science, Chulalongkorn University, Pathumwan, Bangkok, Thailand.

### Synopsis

Integrated Pest Management (IPM) is a cost-effective and ecologically friendly pest management strategy that employs a variety of common-sense techniques. IPM programs make use of up-to-date, comprehensive information about pest life cycles and interactions with the environment. This information, combined with existing pest management technologies, is utilized to manage pest damage in the most cost-effective manner and with the least risk to people, property, and the environment.

The IPM strategy is applicable to both agricultural and non-agricultural settings, including the home, garden, and office. IPM employs all suitable pest management strategies, including but not limited to the prudent use of pesticides. In contrast, organic food production employs many of the same techniques as IPM but restricts the use of pesticides to those derived from natural sources rather than synthetic chemicals.
